

Example 1: Channel

Assumptions and governing equations

Assumptions: Laminar, incompressible, steady state, ignore gravity

Mass conservation

$$\nabla \cdot \vec{V} = 0$$

Momentum conservation

$$\rho \nabla \cdot (\vec{V} \times \vec{V}) = -\nabla P + \nabla \cdot (\mu \nabla \vec{V})$$

Symbols

\vec{V} : Velocity vector ($\frac{m}{s}$)

P : Pressure (Pa)

ρ : Density ($\frac{kg}{m^3}$)

μ : Dynamic viscosity ($\frac{kg}{m.s}$)

Note: The pressure in incompressible solvers of OF is normalized by fluid density.

Boundary conditions

Abbreviations

BC: [Boundary conditions](#)

B.Cs of Velocity

	Inlet	Outlet	Walls
Type	Uniform	Hydrodynamically developed	No slip
Value	$\vec{V} \cdot \hat{n} = V_{in}$	$\nabla \vec{V} \cdot \hat{n} = 0$	$\vec{V} = 0$

B.Cs of Pressure

	Inlet	Outlet	Walls
Type	developed	atmosphere	Zero gradient
Value	$\nabla P \cdot \hat{n} = 0$	$P = 0$	$\nabla P \cdot \hat{n} = 0$
